Project Member Reported by matthew.a.crist, Apr 1, 2013

What steps will reproduce the problem?
1. Register a user with same name, domain, different password
2. Repeat step 1 with a new password
3. Look at address-book.xml on the server

What is the expected output? What do you see instead?
The registration process creates two of the same user with two different passwords.
This can be resolved via the lisp data, but I am placing it as a bug so that I may fix
it at a later date.
